Introduction

Data protection is a critical aspect of modern business operations. As organizations worldwide handle vast amounts of sensitive information, ensuring compliance with global data protection standards is essential. Understanding the fundamental principles of data security, privacy laws, and regulatory frameworks enables businesses to safeguard personal and corporate data from unauthorized access, breaches, and misuse.

Gentex Training Center offers the Data Protection Basics, Compliance with Global Standards course to provide participants with in-depth knowledge of data protection practices, helping them navigate complex regulations efficiently. This five-day program equips professionals with the necessary tools and skills to implement robust data security measures and align with international compliance requirements.

Data Protection Basics, Compliance with Global Standards Course Objectives

- Gain a solid understanding of key data protection principles and frameworks.
- Learn about major international regulations such as GDPR, CCPA, and other global standards.
- Identify the rights of individuals under various data protection laws and how organizations must comply.
- Understand the roles and responsibilities of data controllers and processors.
- Develop skills to assess data security risks and implement effective data protection measures.
- Explore best practices for data privacy, data retention policies, and risk management strategies.
- Gain insights into handling data breaches and reporting requirements.
- Learn how to integrate data protection measures into daily business operations and IT infrastructure.

GENTEX® TRAINING CENTER

- Enhance awareness of ethical considerations in data handling and cybersecurity.
- Understand enforcement actions, penalties, and the importance of compliance audits.

Course Methodology

This course uses a combination of interactive lectures, real-world case studies, group discussions, and hands-on exercises to enhance understanding. Participants will engage in practical scenarios to apply theoretical concepts, ensuring a comprehensive learning experience.

Who Should Take This Course

- Compliance officers and legal professionals
- IT security managers and data protection officers
- Business leaders and risk management professionals
- HR professionals handling employee data
- Any professional responsible for managing or securing personal and business data
